Abstract

In India, women have remained as a neglected section of work force. Women are lagging behind men mainly because of the relative absence of economic opportunities and minimal participation in decision making process. Educational backwardness is another major reason why women are lagging behind men. The participation of women in professional and technical work force is low. Therefore, the organizations concerned with the development of women considered empowerment of women as a solution to these problems. The specialists in economic development have considered entrepreneurship development as a possible approach to empower women. Women entry into business and entrepreneurship is traced out as an extension of their kitchen activities mainly to 3Ps, viz., Pickles, Powder and Pappad. Women in India plunged into business for both pull and push factors. Pull factors imply the factors which encourage women to
